HALO Structures are quick deploying pre-manufactured telescoping and modular buildings that are energy efficient, fire resistant, hard walled and expand or retract as needed. Our patented design includes modular walls that can utilize virtually any exterior panel type up to 1” thick. We currently offer a variety of materials to be used as an exo-skin including but not limited to 4mm poly-carbonate, insulated metal, anti-ballistic glass and solar panels just to name a few. HALO Structures are designed to withstand several feet of snow as well as 130 MPH wind, 3” hail, EF-2 tornadoes, CAT-3 hurricanes and can be secured with our tie down system according to your environmental requirements.

HALO Structures provide the only temperature controlled, rigid and quickly deployed structure in the world. Positive pressure, insulated, medical and data facilities can be built in under 4 hours without special tools or equipment. Pre-built HALO Structures can be delivered, deployed and anchored in under an hour.

HALO Structures enable multiple use cases such as: medical rooms, mobile command centers, vehicle covering, sensitive equipment storage, barracks, instant data centers and expeditionary purposes.

HALO Structures can easily be deployed from transport vehicles or air lifted for immediate response. Contact MCP GOV to custom order to your exact specifications and needs.

The need for rapid deployment, portable, modular and severe weather resistant buildings has never been more necessary!

These Advanced “Smart Buildings” are available with proximity sensors for safety while extending or moving the unit.

USE CASES:
- Protect Assets
- Shelter/Housing for Personnel
- Humanitarian Relief
- Climate Controlled Storage
- Instant Data Center (DDC)
- Sensitive Electronics
- Instant Command Center
- MASH Units
- Camouflaged Storage
- Aircraft Protection
- Holding Location
- Anti Ballistic Structure
World Class Modular Engineering
HALO Structures innovative design provide an instant solution for immediate sustainable relief

HALO Structures is the only system in the world that facilitates the ability to instantly deploy a structure that can occupy an area and can be strategically relocated without being detected. Our automated system includes Tank Track technology, which is remote controlled movement, enabling the user to move the structure according to your needs. This capability allows the user to relocate the structure over uneven terrain. Our system telescopes on inclines as well as slippery surfaces.

Innovative Modular Building System
Multiple Applications and Rapid Deployment

Design & Patents:
- Mobile structures instantly deployed at a moment’s notice
- Can extend and retract by simply pushing a button or from mobile app
- Structural Aluminum frame & powder coating
- Polycarbonate shell (standard) OR option of a variety of other structural or sheet products up to 1” thick, including but not limited to composite sheetmetals, ballistic proof glass, solar panels and insulated sheets
- Self correcting linear rails
- Equipped to endure diverse environmental conditions and extreme weather worldwide
- Combine an unlimited number of units for unlimited ground coverage
